LOVE

ANGER

DANGER

DANGER

DANGER!!!

A small, fluffy tabby kitten with dark stripes and light-colored eyes is sitting in a field of vibrant yellow and purple flowers. The kitten is looking directly at the camera with a curious expression. The background is filled with a dense field of these colorful flowers, creating a bright and lively atmosphere. The word "DANGER" is superimposed in large, white, bold, sans-serif capital letters across the center of the kitten's face.

DANGER

DANGER

danger

His lip began to curl; he smiled; uttering meanwhile with supreme contempt the monosyllable "Joe!"

AND NEVER WAKE UP AGAIN.

Is it possible to hate yourself to death?
If it is, I'm trying...

...breeds, it'd probably chuckle out...

MY DISGUSTING BLOATED BODY?

NOW?

(I REALLY SHOULD LOSE SOME WEIGHT...)

Just fall asleep and never wake up again...

But what if I changed my mind? What if I changed my mind and couldn't reach the phone because I was paralyzed, or something?

God... why can't I just die

It sounds good... "blow you out" and go into a coma? I can't even draw one...

Off to do I know if it would even work? It'd worry. It'd just hang there, dangling... and strangling...

STILL DO I DO IT?

MY parents will age and die

MY body will deteriorate

MY friends will disappear

HOW DO I DO IT? I'D RATHER...

BUT

By burning coal, we are able to make electricity work for us. The electricity lights our homes. That is why we call coal "buried sunlight." There is electricity in everything. But it is not useful to us until it is moving. Coal helps to make electricity move.

A train brings the coal to the electric power plant.

PLEASE EMPTY COAL CARS HERE ↓

The coal is burned in the boiler to heat water. The heat turns the water into steam. The boiler works like a tea kettle.

The steam forces the turbine to turn, just as the wind moves a windmill. This turbine turns the electric generator that forces the electricity to move. This moving electricity is called an electric current.

Electricity is used in many ways. But the most important use of all is to give us light.

High unemployment Medium unemployment Low unemployment

The average person only spent
50 seconds brushing this morning.
They spent **50x longer on Facebook!**

Crest

Unseen children

Children and young people from low income backgrounds and their education

Two out of three pupils eligible for free school meals in England leave their secondary school without five good GCSEs including English and mathematics. This is generally considered the 'employability benchmark'. By the age of 19, six out of ten young people from low income families still lack these qualifications.

London stands out

Pupils from low income families perform best in London, in both primary and secondary schools. Schools in London generally have strong leadership and teaching regardless of whether they serve the most or least deprived communities.

Poor families in rich areas

Pupils from low income families do particularly badly in some relatively affluent areas. Outcomes are worst in the South East, in both primary and secondary schools.

White British pupils

White British pupils are by far the largest disadvantaged group, accounting for around two thirds of all pupils from low income backgrounds. They are the lowest performing major ethnic group in GCSE exams.

Figure 1

- Based on the percentage of FSM pupils at age 19 in each region that had qualified to Level 2 with English and mathematics.
- Attainment at primary is the percentage of Key Stage 2 pupils attaining Level 4+ in English and mathematics. Attainment at secondary is the percentage of Key Stage 4 pupils attaining five GCSEs at A* to C grade including English and mathematics. Key Stage 2 attainment data for FSM and non-FSM pupils only available by region from 2010.
- Figures are the percentage of schools judged good or outstanding for the quality of teaching in each region.
- Figures are the percentage of schools judged good or outstanding for leadership and management in each region.
- The number of free school meal pupils is the total of all eligible pupils in primary and secondary schools as at the 2012 Annual School Census.
- Ethnicity bubbles are based on the number of eligible free school meal pupils at the end of Key Stage 4 only.
- Pupil numbers for ethnicity bubbles have been rounded to the nearest 10 if less than 1000, and to the nearest 100 if 1000 or over.

FORM

That's Not The Way I See It...

There are many different approaches to data visualisation - but two in particular have generated the most discussion.
Edward Tufte favours a traditional statistics-based approach, favouring clarity and accuracy.
David McCandless is more interested in teasing stories out of data and then making them as visually appealing as possible.

Tufte

McCandless

Evidence

The author of *Beautiful Evidence* believes that if you notice the chart first and not the data - then you've failed.

LOVES

Information

His book *Information is Beautiful* is an attempt to apply graphic design principles to data journalism.

Tufte

McCandless

Theorist

He has spent most of his life in Universities, in particular Yale and Princeton.

ROLE

Practitioner

He writes blogs and produces infographics for a range of publications, including the Guardian and Wired.

Present all data to show top-level trends

DISPLAY

Selective use of data to guide reader to key story

Never cheat data

ACCURACY

Tweak visuals if it makes the story clearer

Tufte

McCandless

Design should be minimal

“RICHEST AND POOREST AMERICAN NEIGH

Profile of the UK Private Sector

These graphs show a profile of the UK's private sector split by number of employees; region and industry type.

By Size (employees)

Turnover

The total turnover of the UK private sector is estimated at £3,200 billion **. SMEs generate 48.7% of this total.

Employment

SMEs provide 59.1% of jobs.

Enterprises

SMEs account for 99.9% of the UK's private sector.

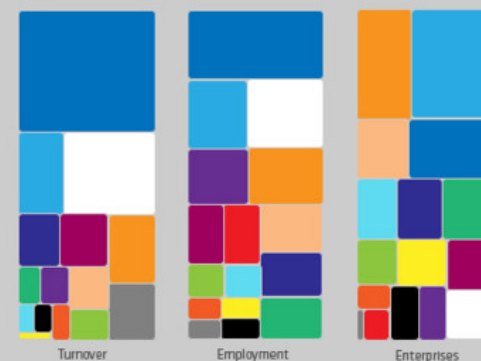

By Region

London provides employment to the most people (15.8%) and contributes the highest proportion of turnover (30.5%).

The South East has the largest number of enterprises (16.3% as compared to London's 15.8%).

By Industry

Whilst construction accounts for 20% of all enterprises in the UK, wholesale and retail trade employ the largest percentage of people (21%).

Of the data available for turnover***, wholesale and retail trade make the biggest contribution to turnover across all industries 37% (estimated at £1,186 billion).

**As defined by the ONS (see Source).

***Turnover estimates exclude VAT.

****No data is provided for turnover from financial and insurance activities.

Source: All data is taken from the Business Population Estimates for the UK and Regions 2010 issued by the Department for Business Innovation and Skills, published by the ONS. Detail here: <http://stats.bis.gov.uk/en/5pe/>

The True Size of Africa

A small contribution in the fight against rampant *Immappancy*, by Kai Krause

Graphic layout for visualization only (some countries are cut and rotated)
But the conclusions are very accurate: refer to table below for exact data

COUNTRY	AREA x 1000 km ²
China	9.597
USA	9.629
India	3.287
Mexico	1.964
Peru	1.285
France	633
Spain	506
Papua New Guinea	462
Sweden	441
Japan	378
Germany	357
Norway	324
Italy	301
New Zealand	270
United Kingdom	243
Nepal	147
Bangladesh	144
Greece	132
TOTAL	30.102
AFRICA	30.221

In addition to the well known social issues of *illiteracy* and *innumeracy*, there also should be such a concept as "*immappancy*", meaning *insufficient geographical knowledge*.

A survey with random American schoolkids let them guess the population and land area of their country. Not entirely unexpected, but still rather unsettling, the majority chose "*1-2 billion*" and "*largest in the world*", respectively.

Even with Asian and European college students, geographical estimates were often off by factors of 2-3. This is partly due to the highly distorted nature of the predominantly used mapping projections (such as *Mercator*).

A particularly extreme example is the worldwide misjudgement of the true size of *Africa*. This single image tries to embody the massive scale, which is larger than the *USA, China, India, Japan* and *all of Europe*..... *combined!*

The True Size of Africa

Correcting the fight against immappancy

The original image by Kai Krause was designed to graphically illustrate the true size of the continent of Africa in relation to various countries mapped by land area. The intention was to counter *immappancy* - that is *insufficient geographical knowledge*.

Unfortunately the original suffered from a fundamental error by showing component countries that were not projected in equal area form. This map uses Goode's Homolisin projection so each country is equal to one another in area. Furthermore, the original list of countries is used, United Kingdom is shown without Eire and Alaska is included to show the proper United States land area.

Kai's original was a great idea. This is merely a cartographic correction (that needs work to tidy it up!!!).

COSMIC JOURNEYS

Humans have traveled to the far shores of the solar system through the eyes of robotic explorers—spacecraft, probes, and rovers that have sent back progressively more astonishing data and images. The colored lines illustrate nearly 200 unmanned missions since 1958: flybys, orbits, soft landings, and intentional crashes, as well as some of the failures. No human has left low Earth orbit since 1972, when Apollo 17 made the last of NASA's nine manned missions to the moon. But odds are we will. A privately funded mission aims to have a man and woman circle Mars in 2018.

THE INNER SOLAR SYSTEM
Soviets reached the moon first, deliberately crashing Luna 2 into the surface in 1959. NASA made the first successful trip to Venus with the Mariner 2 flyby in 1962. Mariner 4 sent images from Mars in 1966. NASA's current Messenger mission is the first to orbit and map Mercury. A fleet of solar missions monitors the sun's activity—and its impact on Earth.

ASTEROIDS AND COMETS
On its way to Jupiter in 1991, Galileo took the first close-up images of an asteroid (Gaspra) and found the first asteroid satellite (Dactyl, which orbits Ida). NASA's Dawn will reach the asteroid/dwarf planet Ceres in 2015. The European Space Agency's Rosetta probe will try to land on a comet in 2014.

- MISSIONS TO ASTEROIDS AND COMETS**
- SUCCESS
 - FAILURE
 - NASA
 - EUROPEAN SPACE AGENCY
 - JAPAN
 - CHINA
 - INDIA

TO JUPITER AND BEYOND
Reaching the gas giant in 1995, Galileo sent images and data from Jupiter and its moons for eight years. The craft Juno arrives there in 2016. Cassini still transmits images of Saturn and its moons; its probe, Huygens, landed on Titan in 2005. In 2015, nine years after launch, New Horizons will study Pluto and the planetary debris of the Kuiper belt.

REACHING FOR DEEP SPACE
Pioneers 10 and 11, launched in 1972 and 1973, were first to travel beyond Mars and capture close-up images of Jupiter. Both have shut down but still on Voyagers 1 and 2 set out in 1977. Each studied Jupiter and Saturn; Voyager 2 then sent the first close-up images of Uranus and Neptune. Both continue to transmit as they leave the solar system for interstellar space.

Images not to scale. Missions launched through the end of 2013. Failures shown reached at least Earth orbit; many others failed at launch.

ART BY SEAN MURPHY/STYLON, SAMUEL BLISS/STYLON, AND ANDREW HARRIS/STYLON. PHOTOGRAPHY AND ILLUSTRATION BY STEVE GRANITZ/STYLON. NASA, ESA, JPL, AND THE UNIVERSITY OF ARIZONA.

Political Climate

Every election cycle has its own issue; what Americans care about is constantly changing. Every January, the Pew Research Center for the People and the Press surveys Americans about what their top political priorities are for the year. These are their answers, going back to 2001.

Select Year

- 2001
- 2002
- 2003
- 2004
- 2005
- 2006
- 2007
- 2008
- 2009
- 2010**

Health-care reform law signed

Select Party

- ALL AMERICANS**
- DEMOCRATS
- REPUBLICANS
